

Red Line Engineering has been creating precision parts for the manufacturing industry since 1991. Our current clients include cryogenic pump manufacturers and the aerospace industry along with businesses that specialize in drum part manufacturing including large and small appliances.

Our production ranges from a single custom piece to production orders consisting of hundreds of like-parts. Our state of the art facility features the latest in machining software including MasterCam and Virtual Gibbs and equipment utilized for milling and turning made by brand name companies such as Hitachi, Akira Seiki, Giddings & Lewis and Wotan.

Utilizing standard materials such as stainless steel and aluminum, exotic metals such as titanium and Invar and durable plastics such as Teflon and UHMW we are able to produce parts that range from .01 to 6.5 foot cubed.

With the certification of our ISO 9001:2008 Quality System clients can be assured that our products are exactly to specification and delivered on time.

We pride ourselves on customer service, efficiency and accuracy. We would like the opportunity to demonstrate our abilities to you and invite you for a personal tour of facilities.
